

Bandpass Glass Filters

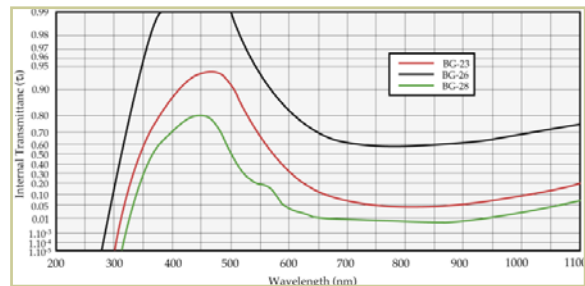

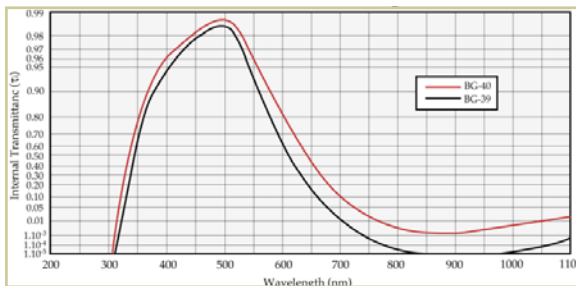

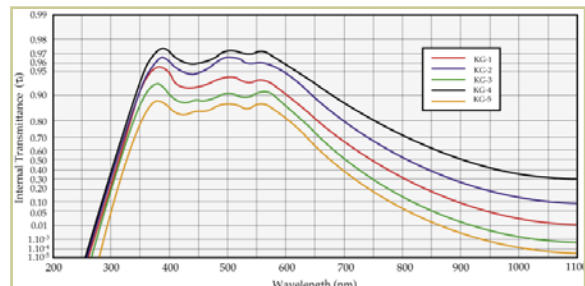

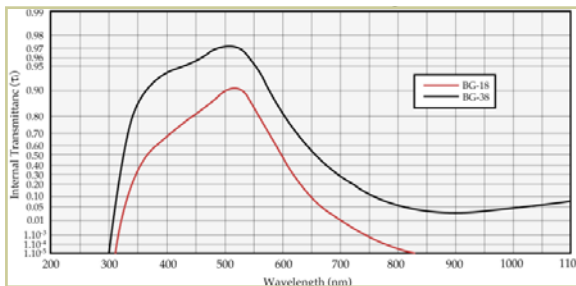

Bandpass glass filters limit the bandwidth of an optical system. These are polished glass filters using Schott glasses or equivalent. See typical curves below which are for 2 mm thickness. Standard filters are circular (12.7 or 25.4mm diameter) or square (50.8 x 50.8 mm) in shape. Thickness usually between 2 or 3 mm.

A wide range of Schott glass filters are available so if you don't see the one you need please ask.

Typical Specifications

Material:	Schott Glass or equivalent
Diameter:	+/- 0.2 mm
Thickness:	2 or 3 mm
Surface quality:	60/40
Clear aperture:	> 85% of diameter
